

Description:

Emollient Gel is a unique natural gel composed of celery seeds and curcuma extracts with different ratios. Celery seeds have potent anti-inflammatory and antirheumatic properties as indicated in the published literatures. On the other hand, curcuma also possesses anti-inflammatory activity because of its role in inhibiting the cyclooxygenase enzyme. Furthermore, Emollient contains other ingredients and some excipients including preservatives.

Uses of Emollient Gel:

As indicated in both preclinical and clinical studies performed on experimental animals and on many patients suffering from muscle spasms and sciatica-localized rheumatic diseases such as osteoarthritis and back pain, this gel possesses the following characteristics:

- Strong analgesic property.
- Potent anti-inflammatory activity

These properties are attributable to the gel's volatile oils such as d-Limonene, essential oils such as Turmerones, and fixed oils such as Eugenol. In addition, it contains some proteins, coumarins, tannins and flavonoids.

How to Use Emollient gel: Emollient Gel should be applied 3- 4 times daily to the affected sites and rubbed gently for 2- 3 minutes in a circular way.

Contra-indications: No contra-indications from using Emollient Gel were reported even if used as adjunct with other pharmaceutical preparations.

Interaction: None reported so far.

Side Effects: Emollient Gel is generally well-tolerated. Both preclinical and clinical studies clearly showed that it has no side effects.

Why Use Natural Herbal Products:

- Natural
- Safe
- Save money and time
- Help specialists and patients to optimize treatment plan
