

ZemaDerm Ointment

A cosmetic balanced formula from herbs and essential oils and some other ingredients and additives, that has been carefully selected based on efficacy and potency to reduce symptoms of eczema and psoriasis.

ZemaDerm formula had been boosted with herbs and oils used in traditional folk-medicine for both eczema and psoriasis. The development of ZemaDerm formula took more than four years of research, which included both pre-clinical and clinical studies, on a large sample of people who suffered from eczema (light, moderate and heavy), child eczema, inflammation of the dermis of the skin, and psoriasis.

The results of those studies showed that in addition to having anti-inflammatory and antibacterial effects, ZemaDerm ointment also had characteristics of wound healing and great potential as a skin emollient. ZemaDerm helps control the redness associated with eczema and psoriasis, prevents further damage, and improves blood circulation, all of which accelerates wound healing and tissue rejuvenation.

Moreover, ZemaDerm ointment reduces itching, allergies, and cracking. It also helps rehydrate the skin. In addition, the clinical studies also demonstrated that ZemaDerm ointment works as a histamine inhibitor (a substance that has a role in hypersensitivity reactions); this can be due to the combined effect of components present in this product.

ZemaDerm ointment is free of cortisones and has few known side effects, with only 5% of patients suffering from hypersensitivity, allergic reactions, and hyperthermia. For best results, it is recommended to use ZemaDerm 3- 4 times daily.
